SUMMARY

Computer Science student at UT Dallas with hands-on development experience in Python, Java, JavaScript/TypeScript, and modern frameworks. Demonstrated ability to lead backend architecture, build machine learning systems processing 100K+ data points, and develop full-stack applications. Proven track record optimizing APIs, implementing Al-powered solutions, and collaborating in Agile team environments.

EDUCATION

University of Texas at Dallas **Aug 2022 - Present**

Bachelor of Science, Computer Science

- **Coursework:** Data Structures and Algorithms, System Programming and UNIX, Computer Architecture, Software Engineering, Probability and Statistics, Artificial Intelligence, Advanced Algorithms Design and Analysis, Intro to Machine Learning

WORK EXPERIENCE

Smart Data Solutions **Aug 2025 - Dec 2025**

Backend Lead & AI Developer *Richardson, Texas*

- Led backend architecture for an enterprise claims analytics platform using Next.js, Prisma ORM, and MySQL, designing and optimizing schemas for users, claims, queues, and widget preferences to support complex reporting.
- Built an AI-powered natural language–to–SQL query engine using GPT models, including LLM integration, a SQL validation/safety layer, and RESTful API routes so non-technical users can run secure ad-hoc queries.
- Implemented NextAuth.js authentication with bcrypt-hashed credentials, JWT sessions, and role-based access control for admins and analysts.
- Developed an admin data management console with CRUD operations and CSV import for claims data, streamlining dataset onboarding and quality control.
- Created a customizable dashboard and widget system (including chart widgets) and collaborated with the frontend team to integrate APIs, improving usability and data visualization.

Spark My Sport **Jan 2024 - Mar 2024**

Full Stack Developer Intern *Richardson, Texas*

- Developed a Typescript program to convert spreadsheet data into JSON files, utilizing object-oriented programming techniques to enhance data interoperability and accessibility.
- Engineered a system using Next.js and JavaScript to visually display JSON data, facilitating real-time data interpretation and decision-making.
- Optimized APIs to pull data and videos from the backend, improving search algorithm efficiency by 15% while documenting code for maintainability and future reference.

AIS **Feb 2023 - Apr 2023**

Team Member *Richardson, Texas*

- Developed a food-scanning Al system using Python's OpenCV library, improving food recognition accuracy by 20%
- Led project life-cycle management, fostering a collaborative team culture and promoting effective communication.
- Devised strategic solutions to optimize the local OpenCV model, reducing processing time by 10%

PROJECTS

Sentiment Analysis Classifier **May 2025**

- Built an end-to-end pipeline classifying 100K+ customer reviews as positive/negative using Multinomial Naive Bayes, Linear SVM, and Logistic Regression, achieving 85%+ accuracy on held-out data
- Engineered TF-IDF feature matrices (5,000 most informative terms), tuned vectorizer parameters to improve model performance by 10%
- Implemented an LSTM-based classifier in TensorFlow/Keras, capturing sequential context to boost accuracy by 5% over traditional models
- Evaluated all models using accuracy scores and classification reports; selected the best algorithm based on precision, recall, and F1-score metrics.

Object Segmentation App **Jun 2024**

- Built a web application to detect and segment objects in images, allowing users to upload images and download individual object images.
- Utilized OpenCV for image processing and contour detection, implemented RESTful APIs with Flask, and integrated with Next.js for the frontend.

SKILLS

- Python, Java, C++, HTML/CSS, JavaScript, MySQL, Dart, Flutter, React, Next.js, OpenCV, GitHub, Rest APIs
